We are one of the top [ESE Lightning Arrester Manufacturers](#) in India. A "lightning arrester" works by collecting energy from the ambient electric field, which intensifies significantly during stormy conditions when lightning can strike. The specific artificial ionization associated with the point impact phenomenon, which occurs when the potential electric field gradient increases, scatters the energy stored in the electrical device by sparking around the point, reducing the lightning rod's ability to attract electricity. is improved and its protective radius is greatly expanded. The advantages of self-contained operation include a greater spectrum of protection, a simpler system, and less maintenance. For more details, please visit the website.
