RADHAKRISHNA NETRALAY & SUPERSPECIALITY EYE HOSPITAL is an ultramodern ophthalmology facility delivering quality vision care to the people of KALYAN & THANE. We are proud to be accredited by the National Accreditation Board for Hospitals (NABH) and are on the panels of Central Government Health Services (CGHS). Above all, we

acknowledge the role of our patients and patrons who have bestowed their trust upon us. It motivates us to challenge expectations and move forward in our endeavor to brighten the world, one vision at a time. We aim to provide you with the most advanced sight care at the most affordable price point.

Consultation

Our consultations include a full range of examinations from a simple prescription check to a full examination of your cornea, lens, retina etc. using precise equipment and skilled personnel. The consultation with the doctors extends to routine annual consultations and special consultations for laser eye treatment like LASIK. We even offer consultations for children, squint, glaucoma, retina, those intending to join airlines, the Navy, police, where the tests include color vision tests etc. Longer consultations are available for those patients who have specialized needs and require more time and our attention due to complicated visual problems. Such cases may be those needing vision therapy (amblyopia in children) and those needing Low Visual Aid support (retinal problems like age related to macular degeneration). Tests Once you are examined by your doctor, there may be some tests that are needed to either confirm a diagnosis or tests needed to be done prior to some treatments or procedure to get more data or information. At Radhakrishna Netralay, we are proud to state that we use the best ophthalmic equipment and lasers to be able to yield the best possible visual outcomes with excellent results.

Procedures

The range of procedures done at Radhakrishna Netralay extend from lasers required for post-cataract cases such as YAG Lasers and lasers for retinal problems such as bleeding in the retina where Argon lasers are needed. The need for any such procedure is diagnosed during a consultation with our doctors. Some procedures can be planned during the same visit itself.
