hello@drnanoxa.com

Dr. Nanoxa is a broad spectrum antimicrobial agent and has the potential to circumvent the global problem of antimicrobial resistance (AMR), as it provides a physical method of destroying pathogens.

Our successful clinical studies mean there is potential to widen the rollout of our non-toxic coating to other regularly-handled steel surfaces, including toilet flush handles, bed rails, and metal medical equipment.

Based on information from the World Health Organization (WHO), the use of chlorhexidine as an antimicrobial agent clearly exhibits some efficacy to inactivate SARS-CoV-2, the virus that causes COVID-19. Dr. Nanoxa has independently assessed laboratory data that shows categorically that their covalently-bonded chlorhexidine-based antimicrobial coating kills gram-negative, gram-positive bacteria, and fungi.
