At Nascent Pipe & Tubes, the latest technology is used to produce quality industrial products. Our manufacturing plants are advanced and equipped with state-of-the-art machinery for precise and quality output. Raw materials of top quality are sourced from authentic vendors so that we could maintain superior standards of quality. The products offered by us are not only sturdy but also very precise in dimension, thickness, and specifications.

Stainless Steel 304H is a carbon-modified version of the general 304 grade having a higher carbon level enhancing strength, particularly at high temperature conditions. The higher strength and heat resistance of 304H make it suitable for structural and pressure-retaining purposes above 500°C temperature applications.
