[FIFO / Gravity Flow Racks](#)

SST Carton flow is a vital part of the supply chain for components at assembly lines and conveyer belt lines. A picking station is constructed of a rack supplied with leaning roller tracks used to transport components to the assembly station. Wheeled tracks can also be used in warehouses as a part of the overall logistic process. Loading on one side and unloading on the opposite according to the FIFO principles (First in first out).

The racks are adjustable and designed from an ergonomic point of view in order to obtain efficient handling for the workers.
