- A fully customizable solution with the fastest turnaround to suit their all the workflows to be automated rather falling in the compelling situation to pay for unnecessary features and finding workarounds

- 
  User roles and authorization divided within staff members based on their hierarchy (up to any level) in the organization.

- Segregation of Zones into Regions and Regions into Areas, further segmented into routes typically and based on this; entire access control is defined in the system to make it a real multi-tenant system.

- Interfacing to 3rd party legacy system like SAP, Dynamics etc. to provide required data on the field.
